Mines and Mining Stocks

SAM NEWHOUSE ON THE CACTUS

Would Like to See the World's Best Experts See the Mine and Pass Judgment.

Samuel Newhouse has spent two whole dend may be passed. Daly Judge is rather dend may be passed. Daly Judge is rather weak, but there is reason to believe that the dividend will not be passed, just the Smelters corporation. Upon his return to the city yesterday morning he declared that it was simply impossible for anyone to comprehend what the mine looked like at the present time without the list of final quotations and record of sales made being as follows: being able to see it.

"I hesitate to talk about the property," said Mr. Newhouse, "because I am afraid of being charged with ulterior motives. Stock market conditions are such at the present time that favorable mention of mines are usually construed as an attempt to boost the price of shares. I will say, however, that nothing would please me better than to open the mine to the inspection of the most competent, critical and exacting expert talent in the mining and exacting expert talent in the finning world. I should like to have men who know what a copper mine is take the measure of the Cactus property; I should like to have them see and understand what we mean when we say that we have a solid ore body 250 feet thick, all ore of a splendid milling grade, with several feet clinging to either wall that averages from 21 to 26 per cent copper by erages from 21 to 26 per cent copper by the carload, just as it is broken. I should like them to see how this immense deposit is being opened up from the 300 down to the 700-foot level; to see what we are getting from the shaft that has been started down from the that has been started down from the ree, and how the mine is equipped to handle the business being done underground. I believe it would open the eyes of the

best of them.
"It has been quite a task to cut out the great station and install the machinery at the mouth of the shaft, and some delays have been experienced. However, all is now practically ready to place ever, all is now practically ready to place the plant in commission and sinking will shortly be resumed. At 1,000 feet deep, I have reason to believe that the mine will be a great deal bigger and richer than it is on the 700 level, rich and big as it is. I believe that any engineer, or layman, for that matter, with a knowledge of mines and mining would unless. edge of mines and mining, would unhes-itatingly indorse what I am now say-ing could they see what I have seen dur-ing the past three days."

Machine Shops Underground.

As an illustartion of how business is conducted underground at the property, Mr. Newhouse stated that a great cham-ber had been hewed out of the ore bodies on the 700 or tunnel level and converted into a splendidly equipped machine shop.
A convenience of this kind one and one A convenience of this kind one and one quarter miles underground is of no small importance when repairs to machinery, cars or locomotives is found necessary. All such things are taken into consideration at the Cactus, where the art of mining, transporting, milling and shipping the product is being reduced to a science.

In all that is now going on the ores the company's big mill come almost en-tirely from regular development. The massive ore bodies are simply being punctured at stated intervals and placed in readiness for regular stoping operations from one level to another as depth is be-

About Dividends.

• Mr. Newhouse stated that, somewhere about the first of the coming month the directors would meet in New York and probably post a dividend. He would not venture a prediction on the amount and he did not expect it would be disbursed until September, though that would be a matter, also, to be determined at the meeting. He was inclined to wait and see how the copper metal market was going to act before fixing a rate of dividends for the company, so it may happen that, while the directors will vote to begin distributions in September the rate of payment may be left open until near the time when the books close. The company is shaping up to begin its career as one of the splendid dividend payers in

SIGNAL PEAK OPENS UP ORE WORTH \$200 A TON

There was rejoicing yesterday by the local operators who control the Signal Peak company, operating in the Seven Troughs district. The company was organized a short time ago by James Chip-man, J. T. Hammond and a number of other prominent men to handle a number of claims located by John Cleghorn, the man who made a snug fortune by the sale of property to Lafayette Holbrook and others, of Provo.

and others, of Provo.

A shaft has been going down on the Signal Peak in a vein of quartz that showed six feet in width at the surface and which cut, through a big porphyry dyke on the property. At a depth of about 100 feet there is now exposed three feet of ore that will average better than \$200 a ton in gold and silver. The latter metal appears in the form of a sulphuret and the gold is free. The samples of ore the gold is free. The samples of ore shown yesterday appear to be almost identical with some of the rich ores from the Nevada Hills mine.

STRIKE IS MADE IN

Prove, June 14.—Wm. M. Roylance, of this city, has received a letter from John F. Westphal, superintendent of the Utah Esmeralda mine at Fitting, Nevada, owned by Utah people, which states that a two-foot vein of rich copper ore has been opened in the shaft. Mr. Roylance sent J. C. Jensen to expert the property, and Mr. Jensen sent the following telegram today:

"Strike looks fine; is just as represented; good show for depth."

Some of the samples Mr. Roylance brought with him on his recent visit to he mine go 50 per cent copper.

Though the Price Drops.

The feature of the market vesterday was the dealing in Sioux Consolidated, the Tintic proposition at the head of which is Senator Reed Smoot. The stock has been active since its listing earlier in the week and while it has not maintained the bulge it took from a start at 40c, it still holds above the original price and finds a ready sale. The Jesse Knight stocks, including Beek Tunnel, Colorado, Mountain Lake, Crown Point and others, continue as favorites in the trading, first one and then another calling for attention in turn. In anticipation that the July dividend may be passed, Daly Judge is rather

MINING STOCK EXCHANGE BAG HOUSE AT

New \$100,000 Plant for Controlling Fumes Is in Successful Operation.

After months of energetic hustling on the part of the management and an expenditure of \$190,000 or more, the United States Smelting. Refining & Mining company now has the new "bag house," the present month and it has worked so so splendidly that Superintendent Prosser now feels justified in declaring that it will do the work and do it well. The construction and operation of this "bag house," the only one in use in Utah, exemplifies the energy and earnestness which the company has shown in its efforts to improve existing conditions and prevent damage from smoke and tumes in the neighborhood of its works. Ex. forts to improve existing conditions and prevent damage from smoke and fumes in the neighborhood of its works. Experts have been employed at the works for several months and they are still carrying on experiments with a view to making still further improvements. The making still further improvements. The "bag house" plant, its equipment and method of operation is thus tersely and explicitly explained by Superintenden Prosser:

Description of Plant.

"It consists of a substantial brick building 192 feet long, 58 feet wide and 60 feet high. It contains 2,080 bags, each bag being 32 feet 6 inches in length and 18 inches in diameter. The smoke from the lead blast furnaces is sucked out of the flue by a fan and forced into the bag house. About twelve feet above the ground level there is a steel floor covering the entire space between the wells. In this floor, at regular intervals, about two feet apart, holes are cut eighteen inches in diameter. A pipe eighteen inches in diameter and six inches long extends upward from each hole. The bags, which are of cotton, are slipped over the end of this pipe and tied with wire. The upper end of the bag is then supported from per end of the bag is then supported from the roof.

"The smoke entering underneath the steel floor passes up through the numerous openings into the bags and cannot get into the upper part of the bag house without passing through the cotton fabrics. This passage of the smoke through cotton fabrics takes out all the through cotton fabrics takes out all the solid matter and soot, so that the gas leaving the bag house is as clear as air.

"The fan pumping the gas into the bag house is driven by an electric motor, which receives power from a special General Electric 750 h. p. steam turbine in the power house. In case this steam turbine should be shut down for remains the bine should be shut down for repairs, the power to run the motor can be furnished from another dynamo. It is thus possible to keep the bag house in operation continuously, and there is no chance that a shut-down in the power house would stop the operation of the bag house."

COPPER STOCKS IN **BOSTON AND NEW YORK**

Following is the daily market comment of Paine, Webber & Co., Boston, tegether with the range of prices of copper stocks and other Boston listings in which the west is interested, as well as a similar report on New York curb transactions, a feature that has just been auged by James A. Pollock & Co. to its private wire service, and from which it is secured for use in this department of The Heraid.

Boston, June 14.—The market was so dull today that it had no feature. Scattered selling goes on and buyers are as scarce as ever. The market is so dull that we must have a change soon. The only bull point on the market is the extreme pessimism of everyone in the east. As yet we see no signs of an upturn and find that good news has no effect on the market and that bad news brings on selling On every rally sell stocks for a turn.

NEW GOLD CAMP.

Queen City, Fifteen Miles From Kawich, Scene of Excitement.

(Special to The Herald.) (Special to The Herald.)

Caliente, Nev., June 14.—Carlos Aguitar, one of the original discoverers of the new gold camp of Queen City, about 135 miles west of here, just over the line in Nye county, and sixty miles from Goldfield and fifteen miles from Kawich, came in today on his way to the north, where he goes for supplies. He and associates have a group of thirty claims. The district is twenty-five miles long and fifteen wide. He expects people from Goldfield and the southern camps to be rushing into the new district making locations. The formation is andesite, cut by a net work of mation is andesite, cut by a net work of rhyolite ledges. His company has just completed its location work and has two shafts thirty-five feet each. The ore

shafts thirty-five feet each. The ore averages up well.

Lou Ward, the electrical engineer for the Bamberger crowd at Delamar and R.

J. Pace of the Delamar Mercantile company, are organizing a company to develop an old slope adjoining the Queen City andesite belt. The indications are that this ground was worked by the Spaniards centuries ago as the slope is eighty feet high, twenty-three feet wide, and nearly 100 feet deep. Assays from the remaining ledge matter and gangue assayed by the Bamberger-Delamar company's assayer at Delamar show \$512, \$258, \$68.17 and \$94 per ton.

The townsite of Queen City has been the company will be the company with the company will be resumed again.

I GO ANYWHERE

The townsite of Queen City has been surveyed and platted and many Goldfield people are moving there. R. J. Pace field people are moving there. R. J. Pace has started a stock of general merchandise to the new camp. A thirst parlor is on the way and John Richards of Almohas opened a meat market. A restaurant and reoming tent are going in and will be open for business this week. Nearly a hundred people are now there and every day brings many more.

a hundred people are now there and every day brings many more.

The town will be supplied with water from springs three miles away. Both townsite and water are owned by Aguitar and associates. President Tully of the Extra West Mining & Milling company of the Gold Spring district, near Modena, is here today, waiting for the stock certificates of his company, so as to issue them to subscribers, of which 100,000 have been taken by employes of the San Pebeen taken by employes of the San Pedro. He is highly elated over the outlook of the property and will begin sinking on the ore Monday and, as the values are sensational, it is expected that shipping

ore will be encountered within two feet. WEEK'S SHIPMENTS FROM TINTIC MINES

(Special to The Herald.) Eureka, June 14.—During the week end-ing last night the mines of the Tintic district forwarded to the valley smelters a total of 153 carloads of ore, the con-tributors and the number of cars shipped each being as follows:

Beck Tunnel Carisa Centennial-Eureka ... Colorado ... Eureka Hill leasers Scranton Uncle Sam Consolidated

Mining Notes. Ten cars of ore from Utah and one from Nevada were released from the Pioneer

Alex Colbath has gone to Ely to see how things are moving at the Federal-Ely. He is accompanied by Mrs. Colbath. John M. Hayes, cashier of the Utah Copper company, accompanied by Mrs. Hayes, left for a vacation trip to the coast last night.

There was released from the Taylor & Brunton sampler yesterday twelve cars of ore from Utah, two from Colorado and one from Idaho.

Perry D. Delmas is in from Elko county, Nevada, where he has been landing a fine copper property. He declines to talk about it at the present time, but promises a genuine sensation by and by. Frank Egan passed through the city yesterday on his way to Minneapolis from Vernon, in the Seven Troughs district. Mr. Eagan is secretary of the Seven Troughs-Dingee company, that was organized a few days age to operate the E. W. Dingee bonanza property known as

Articles of incorporation for the Rock of Ages Mining company were filed in the office of the secretary of state yesterday. The company owns the Emily lode claims in the Clifton district. Tooele county. The capital stock is \$10,000, with shares at one cent each. The officers are: C. E. Berry, president; H. C. Scott, vice president; G. A. Udall, secretary; M. M. Calvert, treasurer. Manager J. H. Turner of the Yerington Ironsides is in receipt of advices from the property to the effect that the shaft is now down below the eighty-foot mark
